Q1: What is CSS Flexbox? Explain `flex-container` and `flex-item`.
 Flexbox is a layout model that allows flexible alignment of items inside a container.

- **Flex container: The parent element with `display: flex;`.**

- **Flex items: The child elements inside the container.**

Q2: Describe `justify-content`, `align-items`, and `flex-direction`.

- **`justify-content`: Aligns items horizontally (left, center, right, space-between, etc.).**

- **`align-items`: Aligns items vertically (top, center, bottom).**

- **`flex-direction`: Defines row or column layout.**
