Q1: Explain the CSS box model and its components.

The CSS box model describes how elements are displayed as rectangular boxes. It has four parts:

- **Content:** The actual text or image inside the element.

- **Padding:** Space between content and border.

- **Border:** Surrounds padding and content.

- **Margin:** Space outside the border, separating elements.

Q2: Difference between `border-box` and `content-box` in `box-sizing`?

- **`content-box` (default):** Width and height apply only to content (padding and border are extra).

- **`border-box`:** Width and height include content, padding, and border.
